Place Acquired: [REDACTED]  
Date Acquired : [REDACTED]  
Date of Info : May 52  
Source : [REDACTED]

1. " [For location of the airfield, see Enclosure A, with legend.] In my [REDACTED] I was unable to observe where the runways or hangars were to be located. I learned from the other drivers, that an airfield was being constructed in that area. I think that there were 2500 DGSM workers on the construction, and trucks loaded with raw materials could be seen along the main road, on the airfield, and on the side road leading to the airfield. I do not know whether work was performed around the clock, as I only passed during the day.
2. "I do not know about the runways or hangars. Accumulation of sand, gravel, iron, and various equipment such as concrete mixers, graders, etc., and the concentration of labor forces offered strong evidence that an airfield was under construction".

- End -

Enclosure: A - sketch-map showing location of Titu Airfield and environs.
